HOSPITAL TRAINING

The training and Placement cell at BCRCP organize hospital training for B. Pharm. Students in different Government and Privet hospital. Hospital pharmacy is a specialized field of pharmacy that is integrated into the care of a medical center. These include centers such as a hospital, outpatient clinic, poison control center, drug information center of residential care facility.

The profession involves choosing, preparing, storing, compounding and dispensing medications for patients in a medical environment. Another important area is the provision of advice to both patients and other health professionals about the safe and effective use of medicines.

Although many of the tasks of a hospital pharmacist are similar to a community pharmacist who works in a community setting, there are some distinctive differences. These include: Increased interaction with prescribers and other health professionals, Greater input in prescribing decisions about drugs and administration, larger team of pharmacists working together in the same institution, Better access to medical records of patients
